A; Reference number: S38950; MuID:94128242
C; Status: preliminary
A; Molecule type: protein
A; Residues: 1-246 <KLE>
C; Superfamily: immunoglobulin C region; immunoglobulin homology
C; Keywords: Immunoglobulin
C; Keywords: Immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Riklebert, S.; Kratzin, H.D.; Zimmermann, B.; Vaesen, M.; Frosch, M.; Weisgerber, C.; Bi
Submitted to the EMBL Data Library, January 1993
Abescription: Primary structure of the murine monoclonal IgG2a antibody mAb735 against
A;Reference number: $40295
A;Accession: $40295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C;Superfamily: immunoglobulin C region; immunoglobulin homology

                                                                                                                                 The present sequence represents the heavy chain varaible region of murine antibody Act-1. Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadcAm-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin binding to MadcAm-1, which is present of high endothelial venules in mucosal lymph nodes. Humanised Act-1 can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing a ligand for alpha4-beta7. It can be used for inhibiting leukocyte infiltration of tissues, e.g. for treating inflammatory diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                               61 NQKFKGKATLIYDISSSTAYMQLSSLTSEDSAVYYCARGGYDGWDYALDYWGQGTSVTVS 120

The present sequence represents the consensus amino acid sequence comprising the variable region of murine Act-1 antibody determined from several independent mouse heavy chain variable region clones. Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadCAM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin binding to MadCAM-1, which is present of high endothelial venules in mucosal lymph nodes. Variable regions were amplified from DNA encoding Act-1 using degenerate PCR primers V20079-82. The degeneracy of the PCR primers produced several different sequences, of which the present sequence is a consensus sequence. The present sequence was used to construct chimeric, humanised Act-1 antibodies, which contain murine antigen binding regions. The humanised immunoglobulin can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing a ligand for alpha4-beta7. It can be used for inhibiting leukocyte as infiltmation of tissues, e.g. for treating inflammatory diseases such a collision and diseases. The immunoglobulin can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    primers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents the amino acid sequence comprising the variable region of murine Act-1 antibody determined from clone H2B#34.

Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadCAM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4-beta7 integrin blinding to MadCAM-1, which is present of high endothelial venules in mucosal lymph nodes. The present sequence was used to construct chimeric, humanised Act-1 antibodies, which contain murine antigen binding regions. The humanised immunoglobulin can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing a ligand for alpha4-beta7. It can be used for inhibiting leukocyte infilitration of tissues, e.g. for treating inflammatory diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein sequence of murine variable heavy chain region of clone H2B#34.

The present sequence represents the heavy chain of humanised murine antibody Act-1. Act-1 is active against human alpha4-beta7 integrin. Muscosal adressin cell adhesion molecule-1 (MadCAM-1) is a ligand of this particular integrin. The Act-1 antibody inteferes with alpha4 beta7 integrin binding to MadCAM-1, which is present of high endothelial venules in mucosal lymph nodes. The humanised immunoglobulin can be used to inhibit the interaction of cells bearing alpha4-beta7 with cells bearing all algand for alpha4-beta7. It can be used for inhibiting leukocyte Infiltration of tissues, e.g. for treating inflammatory diseases such as inflammatory bowel disease. The immunoglobulin can also be used for detection, isolation and diagnosis.

                                                                                                                                                                                                                                                                                     9
which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAD can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephrits and systemic lupus erythematosus. It can also be used to generate reagents to screen for pharmaceutical agents, and treat and/or prevent an above disorder. The sequence was derived by aligning homologous anti-DNA MAD, whose sequences have been published, as well as several MAD of other specificities obtained from a database search.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Single chain antibody; antibody; epidermal growth factor receptor; EGFR; tumour; cancer; glioma; melanoma; carcinoma; diagnosis; assessment; phage antibody library.

vitro and in vivo. They may also be used in a pharmaceutical compostion for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. (See T04011-T04026 and

This is the amino acid of the heavy chain of murine anti-human Fas chain was obtained from HFF7A-secreting hybridoma (FERM BP-5828)

Chair bodies are capable of inducting apoptosis in abnormal cells antibodies are capable of inducting apoptosis in abnormal cells. They are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Hashimoto's disease, graft versus host disease, softenem, pernitatious anaemia, Addison's disease, selectederma, Goodpasture syndrome, crohn's disease, themmatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia carthritis, multiple sclerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergles, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antibodies and proteins bind conserved epitope of Fas antigen used to evaluate drugs in animal models and to treat Fas-associated diseases e.g. autoimmune disease, allergy, atopy, arteriosclerosis, myocarditis, hepatitis and AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10 qvqlqqpgaelvkpgasvklsckasgytftsywmqwvkqrpgqglewlgeldpsdsytny

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA.

To a humanised version of HFETA containing identical CDRs or a humanised version of HFETA containing identical CDRs or a humanised version of HFETA containing identical CDRs interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allery, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft rejection. The present sequence represents the heavy chain of the murine anti-human Fas monoclonal antibody HFETA, which is produced by hybridoma HFETA (FERM-BP-5828).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
             Fas ligand; apoptosis modulator; programmed cell death; autoimmune disease; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis; hepatitis; AIDS; graft rejection; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                      Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains anti-Fas antibody -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                80 nqkfkgkatltvdtssstaymqlssltsedsavyycarnrdysnnwyfdvwgtgttvtvs 139

This invention describes a novel humanized anti-Fas antibody-like conceule (I) that, induces apoptosis in cells with an abnormal Fas/Fas ingenue (I) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cell surface, and prevents contained in the products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, immunodilatory, dermatological, immunosupressive, thyromimetic, antirhemmatic, nephrotropic, antiinfertility, neuroprotective, antiarteriosclerotic, cardiant and hepatropic activity. (I) induce antiarteriosclerotic, cardiant and hepatropic activity, induce containt and hepatropic activity, systemic inhibition of ligand binding (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic contains associated with the Fas/Fas ligand system, especially systemic lupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft conemia, Addison's disease, rheumatoid arthritis, graft conemia, Addison's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral cone inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in curvine antive ligand, do not induce liyer disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents and murine antibody HFETA heavy chain described in the mative ligand, do not induce ligand eriver disease, and have reduced risk of a murine anti-normal antibody HFETA heavy chain described in the
                dermatological; immunosuppressive; thyromimetic; antitrheumatic; anti-Fas; nephrotropic; antinfertility; neuroprotective; antiarteriosclerotic; nephrotropic; numanized; apoptosis; systemic luues crythematosus; HEFA; Hashimoto disease; rheumatolod arthritis; graft versus host disease; Sjorgen's syndrome; anemia; Addison's disease; scleroderma; sterility; Goodpasture syndrome; Crohn's disease; thrombopenia purpura; antity; multiple sclerosis; Basedow's disease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Anti-epidermal growth factor receptor (EGFR) single chain antibodies and antibodies constructed from anti-EGFR antibody fragments can be used for diagnosis of tumours and assessment of tumour growth in vitro and in vivo. They may also be used in a pharmaceutical composition for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library. (See T04011-T04026 and

MAD 55.1 (ECACC 93081901) recognises the colorectal tumor-associated antigen CA55.1. cDNAs for the heavy (094037) and light (094036) chains of 55.1 were isolated, and F(ab)', F(ab)2, Fab, Fv, scFv or V-min humanized 55.1 constructs have been expressed in myeloma cells and E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20 qvq1qqpgaelvkpgasvq1sckasgytftgywihwvkqrpgqglew1gevnpstgrsdy 79

                                                                                                                                                                                                                                                                                                                                                                                        This polypeptide sequence comprises a consensus sequence of murine heavy chain variable regions (VH) selected on the basis of identity to the VH region (see W27120) of monoclonal anti-idiotype antibody 11010. The sequences were obtained from a GenBank database search. A VL consensus (W27121) was also produced. 11010 has at least 18 departures from the consensus sequences (7 in the light chain and 11 in the heavy chain). B Occur within CDRs and 10 outside CDRs. 11010 polypeptides and polynucleotides can be used in vaccines and pharmaceutical compositions for the treatment of human milk fat globule-associated diseases such as breast
                                                                                                                                                                                                                                                                                                                                        Monoclonal anti-idiotype antibody 11D10 - elicits immune response against human milk fat globule disease associated tumours, especially breast cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

R54756 showes an ScFv (VH and VL partner domains are linked via a flexible oligopeptide) between the HindIII and EcoRI sites of pRASI11. The 130 bp HindIII-PstI fragment of pRASI11 (Q64806) was used to replace the corresponding fragment of pRASI11 (Q64817), to qenerate pRASI8 This generates a NIP-reactive ScFv (NIP = 4-hydroxyl-3-iodo-5-nitrophylacetic acid) with a BgIII cloning site immediately downstream of the pelB leader, suitable for inserting fragments of Ad5 fibre.

The invention is concerned with the fusion of an ScFv with the Ad5 fibre that the fusion sequence can be used to target cells for
         Virus with modified binding molety specific for the target cells - used to deliver genes for gene therapy and cancer treatment \,
                                                                               Example 2; Page 69-70; 110pp; English.
                                                                                                                                                                                                                                                                                                                                                              gene therapy.
